INSURANCE PORTFOLIO PERFORMANCE & RISK ANALYTICS (Q1 2025)

Executive Dashboard for Loss Ratio Control, Claims Monitoring, and Underwriting Profitability

THE CHALLENGE: CLAIMS VOLATILITY & MARGIN PRESSURE

In the insurance sector, sustainable profitability relies on maintaining a strict equilibrium between collected premiums and incurred claims. Without real-time visibility into loss ratio fluctuations across quarters, underwriting margins remain exposed to unexpected claim surges and delayed corrective actions.

THE SOLUTION: CENTRALIZED BI RISK MONITOR

We engineered a streamlined, executive-ready Business Intelligence solution designed to audit Q1 2025 operational performance. By consolidating raw policy and claims records into an automated visual model, leadership gains immediate traceability over total premiums ($107.66M), claims payouts ($66.79M), and the overall loss ratio (62.04%).

STRATEGIC IMPACT & DASHBOARD ARCHITECTURE

This tool empowers data-driven decision-making through two core analytical views:

01

Overview & Profitability:

High-level KPI tracking of net underwriting margin and global risk exposure.

02

Monthly Trend Analysis:

Time-series evaluation comparing monthly premium inflows against claim outflows (Jan – Mar 2025) to detect seasonal risk patterns early

Profitability & Loss Ratio by Line of Business(Q1)
